

Position Posting

JOB TITLE: IT Project Manager and Team Leader

Reporting to: Automation and Industrial Computing manager at head office in Quebec

Location: Ontario, Kanata

Employer description

Since 1982, Ohmega Group has been working as a Mechanical and Electrical contractor in construction, tenant improvement, and operation and maintenance. Our team is made up of more than 60 specialized technicians and engineers in multiple disciplines including: computer science, electrical, electromechanical, mechanical, construction and telecommunications.

While continuing to offer its core services, Ohmega Group has grown its expertise in the field of Industrial Automation and computing, cybersecurity, private cloud and web applications, and database and data historian integration. This growth has allowed the company to be recognized as leader in their field within the renewable energy sector and related markets throughout Eastern Canada. This reputation has led to a project portfolio that now spans the country, from Maritime provinces to British Columbia.

Within its development strategies, Ohmega is setting up a permanent office outside of its Headquarters located in the Province of Quebec. At the same time, investments are made to significantly growth the organisation's industrial computing activities in the Americas. With its leading position in Eastern Canada and multiple installations elsewhere in Canada, the service offer is the most successful in the renewable energy generation and related markets.

And finally, with the creation of GONOCC division, in 2015, Ohmega group has further solidified their reputation of exceptional service by establishing the first continually manned (24/7) independent control center to monitor industrial installations in the country.

Mandate introduction

As part of the technical team, the candidate will be a key player of the development of the Ontario market.

Supported by the CEO, as wells as a group of talented and experienced employees located at the companies headquarters in Quebec, in the Kanata or at the Calgary's office, the manager of the Kanata's office will be provided with all the tools required to reach his goals and help his local team to perform in the Ontario market and all the other projects to be assigned.

Main tasks and responsibilities

- Be the local point of contact and the company's delegate for all tasks related to the implementation of the new point of service in Kanata;
- Be the manager of the team of 2 to 5 employees in Ontario;
- Carry out industrial IT projects at different stages (evaluation, development, installation and commissioning, maintenance and optimization);
- Investigate, repair and debug various IT networks;
- Programming of various IT equipment (firewalls, routers, switches);
- Configure and maintain industrial computers, servers and storage equipment (OS, virtual machine, network interfaces);
- Configure and manage different type of databases (owner historian, Oracle, SQL);
- Design complete IT and computer systems;
- Realise or coordinate on-field interventions and participate to the remote support of our clients' operations;
- Writing or supervise the writing of technical documentation.

Skills and competencies required

- Bachelor degree in Information Technology, Computing Science or related field;
- Security certifications for construction sites would be an advantage;
- Ability in leading a team, management and project management;
- Ability in programming;
- Good knowledge of virtualisation methods and software;
- Experience with IT, networking and Cybersecurity equipment, with different manufacturers (Cisco, Fortinet, Sonicwall);
- Experience in database configuration and reporting;
- Experience with computers, servers and storage equipment;
- Cisco certification (CCNA) would be a good advantage;
- Good sense of method, organization, anticipation and initiative;
- Ability to work as a team and monitor tasks;
- Good communication skills and customer service ability;
- Fluency in written and spoken English and a good knowledge of French would be an advantage.

Experiences

- At least 5 years experience in industrial IT and computing within a high-tech organization, preferably in the engineering services sector;
- At least 3 years experience in project management.

Base salary

- Compensation will be determined based on the candidate's experience and qualifications.

Employee benefits

- You will be eligible to participate in a number of Company-sponsored benefits, with Medical / salary / disability / life insurance program in place;
- Registered Retirement Savings Plan in place;
- Vacation in accordance with the Company's vacation policy.

Start date:

- As soon as possible.
